

Function Assessment Trainees

The following is a list of those who have completed one of the five-day technical training sessions provided by the Washington State Department of Ecology. The workshops cover application of the *Methods for Assessing Wetland Functions: Riverine and Depressional Wetlands in the Lowlands of Western Washington, Parts 1 and 2*. To be on the list, the trainee had to sign the attendance sheet for a minimum of four of the five days of training.

Ecology also trained people during method development, first for those who collected the data used for calibration of the models and, later, for those who tested the calibrated methods. The list only includes those from the earlier training sessions that either attended a one-day update that covered changes made to the final methods or that have been accompanied by project staff in the field. These individuals have had training equivalent to the five-day training.

The Department of Ecology highly recommends that those who apply the methods only do so after attending one of the five-day training sessions. Training is important to properly interpret and apply the methods, especially when collecting data in the field. Training is also important so results are accurate, consistent, and reproducible.

The list will be updated as additional training sessions are completed. The next training is expected to take place in the spring or early summer of 2001. Contact Tom Hruby at thru461@ecy.wa.gov or (360) 407-7274 for inquiries about the five-day technical training sessions and questions about the list. Contact Andy McMillan at anmc461@ecy.wa.gov or (360) 407-7272 about one-day introductory workshops designed for those who receive reports and make decisions about wetlands.
